Time: 60 minutes **Test II** **8 Marks**

Submission II : B- tree
Set B

Part A
Answer all questions

1. Consider a B- tree of order 4 with elements 15, 20 and 32 as shown below. Insert elements 5, 1, 7, 6 , 16, 51 and 33 in the same order. Explain each insertion step with crisp and clear explanations.

7*0.25=1.75

15	20	32

2. Consider the B-tree you have gotten after inserting elements given in Question 1. Delete elements 7, 5 and 20. Give a brief explanation for each deletion.

3*0.75=2.25

Part B

Note:- Use C/C++ for implementing the following question. Two test cases will be provided during the evaluation. Each test case carries 2 marks each.

Question: Implement a B- Tree, **of order 4**, which **uses characters as its key values**. The B- Tree should incorporate the following functionalities:

Insert – To insert a key value into the B- Tree

Search – To search for a key value in the B- Tree. If the key value is found, return TRUE. Else, return FALSE.

Print – To display the elements currently present in the B- Tree (**in-order traversal**)

(2 x 2 = 4 marks)
